

TEST CASE REPORT

TC-02: Double-Booking Prevention – K Ravish Rao – AM127

1. Test Case Identification

Test Case ID	TC-02
Test Case Title	Double-Booking Prevention
Requirement ID	FR-003
Requirement Type	Functional Requirement
Test Category	Booking / Scheduling
Priority	High
Test Owner	Owner 2

2. Requirement Under Test

FR-003: The system shall allow students to view available mentor time slots and book a mentorship or mock-interview session without double-booking a mentor slot.

3. Test Objective

To verify that the system prevents two students from successfully booking the same mentor time slot and ensures that an already-booked slot cannot be booked again.

4. Test Scope

In Scope:

- Booking an available mentor time slot by the first student.
- Attempting to book the same mentor, date, and time slot by a second student.
- Validation that the already-booked slot is rejected or unavailable.
- Verification that only one confirmed booking exists for the slot.

Out of Scope:

- Mentor recommendation and matching.
- Creation and recording of interview scorecards.
- Privacy and soft-deletion.
- System performance and peak-load testing.

5. Preconditions

1. The system is available for testing.
2. A mentor has an available time slot.
3. Student A and Student B have valid accounts and can access booking.
4. The selected mentor slot is initially unbooked.
5. The system provides a mechanism to view booking status.

6. Test Data

Test Data	Description	Purpose
Student A	First student attempting to book the slot.	Verify that the available slot can be booked successfully.
Student B	Second student attempting to book the same slot.	Verify that the system prevents duplicate booking.
Mentor X	Mentor with an available time slot.	Target mentor for the booking test.
Same Date and Time Slot	One specific mentor session slot.	Used for both booking attempts to test duplicate-booking prevention.

7. Test Procedure

Step	Action	Expected Result
1	Log in as Student A.	Authentication succeeds.
2	Select Mentor X and the available date/time slot.	The selected slot is shown as available.
3	Book the selected mentor slot as Student A.	Booking succeeds and the slot becomes unavailable/already booked.
4	Log in as Student B.	Authentication succeeds.
5	Select Mentor X and attempt to book the same date/time slot.	The system identifies that the slot is already booked.
6	Submit the booking attempt as Student B, if the interface permits the attempt.	The second booking is rejected and no duplicate booking is created.
7	Verify the booking records/status for the mentor slot.	Exactly one confirmed booking exists for the tested slot.

8. Expected Results

- Student A successfully books the initially available mentor slot.
- The mentor slot is no longer available for another student after the successful booking.
- Student B cannot successfully book the same mentor, date, and time slot.
- The system rejects the duplicate booking attempt or prevents selection of the already-booked slot.
- Only one confirmed booking exists for the mentor slot.

9. Acceptance / Pass-Fail Criteria

PASS: The test case passes if Student A can book the available slot and Student B's attempt to book the same mentor slot is prevented, resulting in only one confirmed booking.

FAIL: The test case fails if Student B can also obtain a confirmed booking for the same mentor, date, and time slot, or if the system creates more than one confirmed booking for that slot.

10. Test Status

Execution Status	Not Executed
Reason	This report specifies the test case and expected results. No system implementation is being tested as part of this report.
Final Result	Pending / Not Applicable until implementation is available
